(When tapping out the coffee, the filter strainer can be held in place using the plastic marker). water container, lid of the boiler Making Cappuccino ® making cappuccine of this appliance can be used not only to make espresso coffee but also to foam the milk needed for cappuccino.

Part of the text of the instruction manual for a *Krupps* espresso mini coffee machine. The manual was inconsistent when describing parts of the coffee machine. On a level of safety I suggested adding *Drawing 13* to the manual because, though you are told to remove the filter holder and keep the filter strainer in the filter holder, you are not told how to do this safely (both the filter holder and the filter strainer are very hot at this point).

Drawing 13 describes how to tap out the coffee while holding the filter strainer in the filter holder using the plastic clamp.
